Grading Rubrics

There are four parts of the project:

1. Data collection and preprocessing. (20 points)
   - **A. Title and teammates**
     Please decide your team members and project topic.
   - **B. Collecting and storing the data**
     Please decide the target domain of your project. You will need to prepare the data for your project and store it in the database.
   - **C. Report**
     Please describe your project topic, how you collect the data and the details of the data, such as size, data format and so on in your report. Each team needs only one submission of the report by one of the team members.
2. Data analysis. (20 points)
   - A. Problem definition
     Please describe what specific questions you are about to answer with your project.
   - B. Data Preprocessing
     Please describe the original data quality, what strategies you've tried to improve it, and any additional calculations you applied.
   - C. Feature selection
     Please select the group of features you will use based on your data and reasons.
   - D. Visualization
     Please include any initial results you have with your data, such as analysis on one feature, the distribution of the collected data.
   - D. Report
     Please include all the above in your report.
3. Summarization. (20 points)
   - A. Model training

     Please describe which model(s) you applied, which model(s) perform better than others, which metric you used to evaluate the performance of your model(s), did you try to improve the results.
   - B. Conclusion

     Please conclude your project including the interesting results, such as the importance of different features, the factor(s) impacting training efficiency.
   - C. Future work

     Please analyze if further improvement can be done.
   - D. Report
4. Project reports (40 points).
   - A). Team name. Team member and roles.
   - B). Problem introduction.
   - C). Solution.
   - D). Result.
   - E). Lessons you learned.
   - F). Further discussion for the result.
